

# **Job posting and applying web app**

## **1. Project Description**

Jobs are important for everyone whether a company or for people searches for jobs, so we need to make this jobs availability more easier online by letting any company register its information and each user(applicant) register his information including his skills. Companies can post their jobs' details and users can apply to jobs by filling up the job role form. Users can find the jobs by searching for the job role, company name or the skill they have. Companies can delete the job and update it.

## **2. Project Plan**

### **Milestone 1:**

In the first milestone, we will deliver the following functionalities:

- 1-Company register and login
- 2-Company can post their jobs' forms

### **Milestone 2:**

In the second milestone, we will deliver the following functionalities:

- 1- User register and login
  - a-User skills
  - b-Education
  - C-Personal information
- 2-Users can search for the jobs by:
  - a-company name
  - b-Job role
  - C-skills
- 3-Jobs will be displayed for the user after the search

### **Milestone 3:**

In the third milestone, we will deliver the following functionalities:

- 1- User can change his information, i.e. name, skills, phone number
- 2- User can apply to the job by filling the form
- 3- companies can review applicants filled form

...

- 3- companies can change or update their jobs' forms
- 4- companies can delete their jobs' forms
